## Experience

|                                                                                                                                                                                                                                                                                                                                                                                                                                         |                                  |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------|
| <b>Cloud Computing Lead — AWS Cloud Club / AWS Builders Group</b><br><i>DCRUST</i>                                                                                                                                                                                                                                                                                                                                                      | 2025 – Present<br>Haryana, India |
| <ul style="list-style-type: none"><li>– Led a 5-member AWS Cloud Club team focused on cloud infrastructure, DevOps, and deployment best practices.</li><li>– Designed and delivered 3 technical workshops on Cloud Computing, AWS, Docker, CI/CD, and production deployment workflows for 120+ students.</li><li>– Promoted hands-on cloud-native development through practical infrastructure and deployment demonstrations.</li></ul> |                                  |
| <b>Full Stack Developer Intern</b><br><i>XZECT Labs Pvt. Ltd.</i>                                                                                                                                                                                                                                                                                                                                                                       | June 2024 – Aug 2024<br>Remote   |
| <ul style="list-style-type: none"><li>– Built AI-assisted applications using Gemini API, Python, JavaScript, and React Native.</li><li>– Optimized application performance, reducing load times by 30%.</li><li>– Worked on backend optimization, API integrations, and scalable deployment workflows.</li></ul>                                                                                                                        |                                  |

## Projects

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |      |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>ClubOps — Next.js, Node.js, Prisma, PostgreSQL, Cloudflare — <a href="#">Live</a></b>                                                                                                                                                                                                                                                                                                                                                                                                                    | 2026 |
| <ul style="list-style-type: none"><li>– Built and deployed a SaaS platform for university club, event, attendance, and certificate management with role-based access control and automated workflows.</li><li>– Implemented secure authentication, attendance tracking, PDF certificate generation, and email automation using Next.js, Node.js, Prisma, and PostgreSQL.</li><li>– Deployed and maintained production infrastructure using Cloudflare, handling 7K+ requests and 800+ page views.</li></ul> |      |
| <b>PullRequest Arena — Python, OpenEnv, Hugging Face — <a href="#">GitHub</a></b>                                                                                                                                                                                                                                                                                                                                                                                                                           | 2026 |
| <ul style="list-style-type: none"><li>– Developed an evaluation framework for benchmarking AI agents on pull-request review, bug detection, and patch generation tasks.</li><li>– Built automated workflows to assess correctness, review quality, and patch effectiveness across multiple agent configurations.</li><li>– Submitted as part of the Meta × Hugging Face OpenEnv Hackathon and released as an open-source project.</li></ul>                                                                 |      |
| <b>EdgePay — Kotlin, React Native, GSM, USSD, SMS Manager — <a href="#">Live</a></b>                                                                                                                                                                                                                                                                                                                                                                                                                        | 2026 |
| <ul style="list-style-type: none"><li>– Designed and developed a live AI-powered offline payment system enabling secure transactions in low-connectivity environments.</li><li>– Implemented transaction workflows supporting payment continuity without continuous internet availability.</li><li>– Recognized through multiple hackathon wins and startup pitching event invitations for addressing real-world offline payment challenges.</li></ul>                                                      |      |

## Technical Skills

- **Languages:** Java, Python, JavaScript, SQL, C
- **Frameworks & Tools:** Next.js, Express.js, React Native, Git, Linux, Prisma, REST APIs
- **Cloud & Databases:** AWS, Google Cloud Platform, Docker, Cloudflare, PostgreSQL, Firebase
- **Core Areas:** Data Structures and Algorithms, Full Stack Development, Distributed Systems, Artificial Intelligence, Machine Learning

## Achievements

- Winner at ORBIX Hackathon (IIIT Delhi), Winner at HackRust 1.0 (GDG DCRUST), and 2nd Position at Technophilia 7.0 (Delhi University)
- Selected as Contributor for GirlScript Summer of Code (GSSoC) 2026
- Won 1st Prize in SQL Master Competition at Technova
- Cleared Internal Round of Smart India Hackathon
- Published review paper: [Transformers and Beyond: A Review of Key NLP Developments](#)
